## ACKNOWLEDGMENT

Any accomplishment requires the effort of many people and this work is no different. I would primarily like to thank the Almighty God for blessing us with this grace for the completion of my work.

We wish to express our sincere gratitude to the following persons with whose help and encouragement we have completed our project successfully.

We extend our thanks to our chairman **Alhaj K Moosa**, for his leadership and socialism which helped us to carry out this project.

Our deepest sincere gratitude and hearty thanks to our principal **Dr. K. G. Parthiban M.E., Ph.D.**, for his patronage and leadership which has helped us to carry out this project.

Our sincere gratitude and thanks to the Head of the department **Dr. R. Vadivelu, Ph.D.**, Department of Computer Science and Engineering for his encouragement, guidance and support to complete the project.

We deeply express our profound gratitude to our beloved Internal guide **Mr. Manoj Prabhakar J M.E.**, for having extended his full cooperation and guidance without which this project would not have been a success.

We also thank our class advisor and all other staff members and friends for their most cooperation

## **ABSTRACT**

Even with greatest of ideas to avoid railway accidents, many trains accidents still happen worldwide. This paper shares an idea on how to avoid train collision by using an automated control incorporated in the trains. In this proposed paper we have implemented ideas such as pre-crashing using RFID sensor, ultrasonic sensor in-order to choose an array of commands which would run as per the conditional algorithm created in the microcontroller. We would also have a EPM to control the speed of the motor to lessen speed. This system will be more efficient since it was fully automated and also it was cost effective

# **CHAPTER 1**

## **INTRODUCTION**

### **1.1 PROJECT OVERVIEW**

Smart Solutions For Railways is to manage Indian Railways is the largest railway network in Asia and additionally world's second largest network operated underneath a single management. Due to its large size it is difficult to monitor the cracks in tracks manually. This paper deals with this problem and detects cracks in tracks with the help of ultrasonic sensor attached to moving assembly with help of stepper motor. Ultrasonic sensor allows the device to moves back and forth across the track and if there is any fault, it gives information to the cloud server through which railway department is informed on time about cracks and many lives can be saved. This is the application of IoT, due to this it is cost effective system. This effective methodology of continuous observation and assessment of rail tracks might facilitate to stop accidents. This methodology endlessly monitors the rail stress, evaluate the results and provide the rail break alerts such as potential buckling conditions, bending of rails and wheel impact load detection to the concerned authorities.

## **1.2. PURPOSE**

Internet is basically system of interconnected computers through network. But now its use is changing with changing world and it is not just confined to emails or web browsing. Today's internet also deals with embedded sensors and has led to development of smart homes, smart rural area, e-health care's etc. and this introduced the concept of IoT . Internet of Things refers to interconnection or communication between two or more devices without human-to-human and human-to-computer interaction. Connected devices are equipped with sensors or actuators perceive their surroundings. IOT has four major components which include sensing the device, accessing the device, processing the information of the device, and provides application and services. In addition to this it also provides security and privacy of data . Automation has affected every aspect of our daily lives. More improvements are being introduced in almost all fields to reduce human effort and save time. Thinking of the same is trying to introduce automation in the field of track testing. Railroad track is an integral part of any company's asset base, since it provides them with the necessary business functionality. Problems that occur due to problems in railroads need to be overcome. The latest method used by the Indian railroad is the tracking of the train track which requires a lot of manpower and is time-consuming

## **CHAPTER 2**

### **LITERATURE SURVEY**

#### **2.1 EXISTING SYSTEM**

In the Existing train tracks are manually researched. LED (Light Emitting Diode) and LDR (Light Dependent Resister) sensors cannot be implemented on the block of the tracks]. The input image processing is a clamorous system with high cost and does not give the exact result. The Automated Visual Test Method is a complicated method as the video color inspection is implemented to examine the cracks in rail track which does not give accurate result in bad weather. This traditional system delays transfer of information. Srivastava et al.,(2017) proposed a moving gadget to detect the cracks with the help of an array of IR sensors to identify the actual position of the cracks as well as notify to nearest railway station . Mishra et al., (2019) developed a system to track the cracks with the help of Arduino mega power using solar energy and laser. A GSM along with a GPS module was implemented to get the actual location of the faulty tracks to inform the authorities using SMS via a link to find actual location on Google Maps. Rizvi Aliza Raza presented a prototype in that is capable of capturing photos of the track and compare it with the old database and sends a message to the authorities regarding the crack detected. The detailed analysis of traditional railway track fault detection techniques is explained in table.

### **2.3 PROBLEM STATEMENT DEFINITION**

Among the various modes of transport, railways is one of the biggest modes of transport in the world. Though there are competitive threats from airlines, luxury buses, public transports, and personalized transports the problem statement is to answer the question “What are the problems faced by the passengers while travelling by train at station and on board”.

## CHAPTER 3

### IDEATION AND PROPOSED SOLUTION

#### 3.1 EMPATHY MAP CANVAS

The image displays a three-column template for an Empathy Map Canvas. The first column, titled "Brainstorm & idea prioritization", includes a lightbulb icon, instructions to use the template for brainstorming sessions, and a list of icons representing 14 minutes to prepare, 1 hour to collaborate, and 2-8 people recommended. The second column, titled "Before you collaborate", includes a blue circle icon, instructions to prepare before collaborating, and a list of icons representing 14 minutes to prepare, 1 hour to collaborate, and 2-8 people recommended. The third column, titled "Define your problem statement", includes a blue circle icon, instructions to define the problem statement, and a list of icons representing 14 minutes to prepare, 1 hour to collaborate, and 2-8 people recommended. The template also includes a "Need some inspiration?" section at the bottom left and a "Key rules of brainstorming" section at the bottom right.

**Brainstorm & idea prioritization**

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

14 minutes to prepare  
1 hour to collaborate  
2-8 people recommended

**Before you collaborate**

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

14 minutes

**Define your problem statement**

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

14 minutes

**PROBLEM**

Train accidents?

**solutions:**

1. automatic gate control  
2. ~~automatic~~ railway track monitoring

**Key rules of brainstorming**

To run an smooth and productive session

Stay in topic. Encourage wild ideas.  
Defer judgment. Listen to others.  
Go for volume. If possible, be visual.

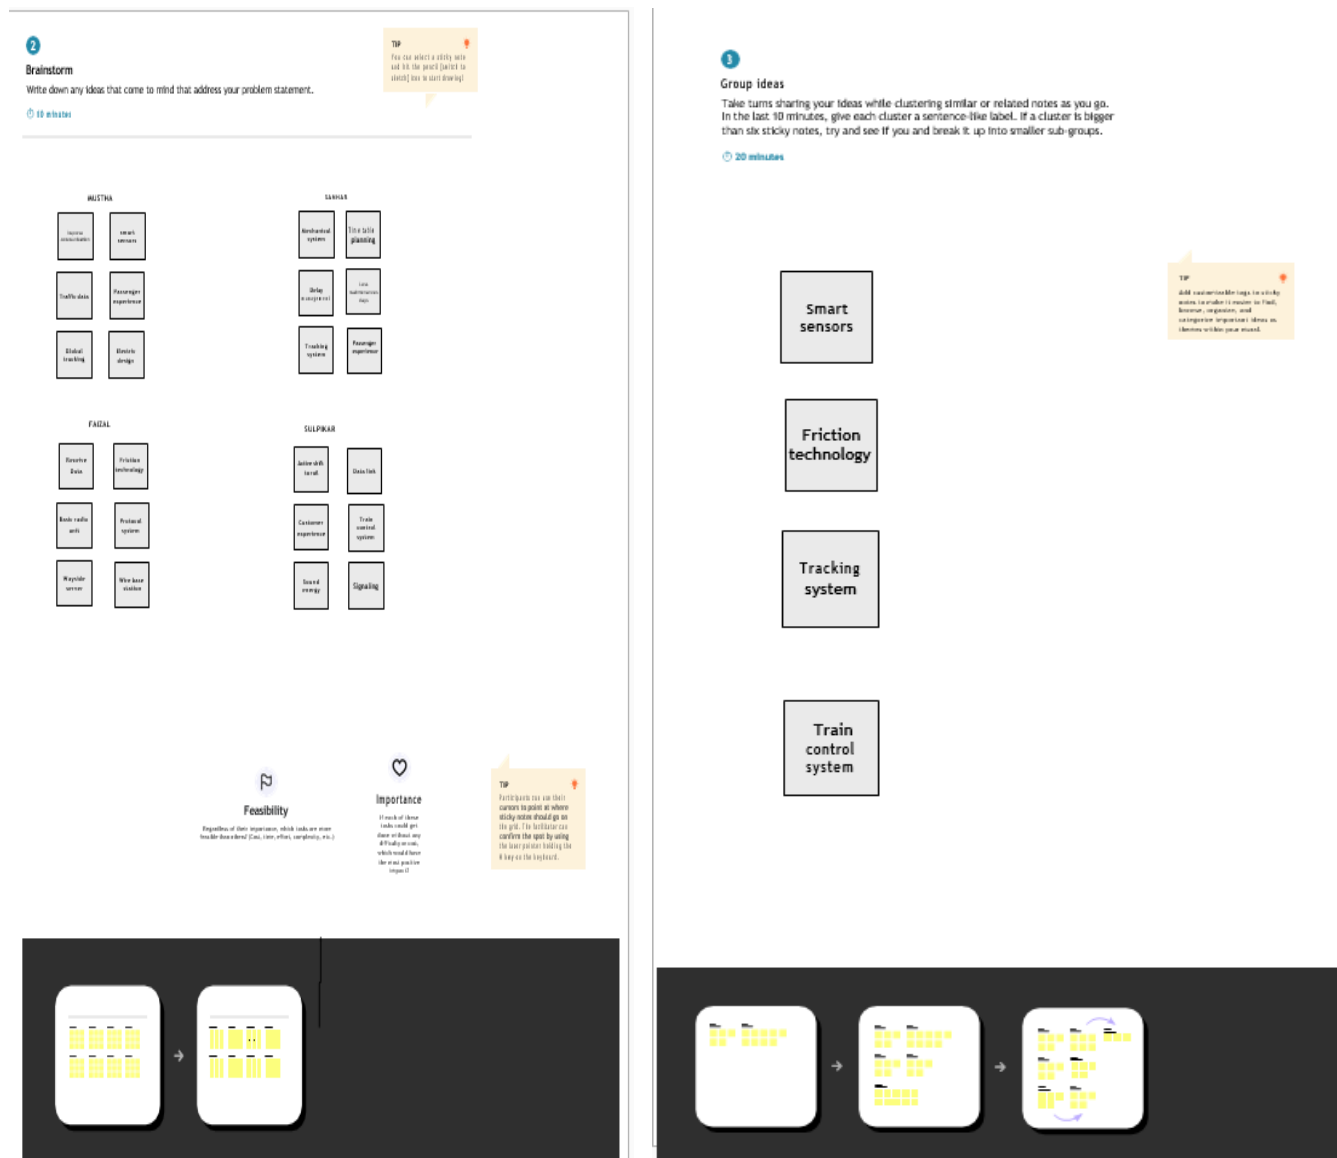

**Need some inspiration?**

See a Facebook version of this template for inspiration.

## 3.2 IDEATION & BRAINSTORMING

4

Prioritize

Your team should all be on the same page about what's important: moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

→

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

Share the mural

Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.

Export the mural

Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

Keep moving forward

Strategy blueprint

Define the components of a new idea or strategy.

Open the template →

Customer experience journey map

Understand customer needs, motivations, and obstacles for an experience.

Open the template →

Strengths, weaknesses, opportunities & threats

Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.

### 3.3 PROPOSED SOLUTION

S.NO	PARAMETER	DESCRIPTION
1	Problem Statement (Problem to be solved)	In order to satisfy the passengers, the Railways provides various services to its passengers But, the passengers can face some problems
2	Idea / Solution description	The idea is to minimize the ticket booking problems among the passengers by providing Onlinemode of booking rather than papers. . In queues in front of the ticket counters in railway stations have been drastically increased overthe time.
3	Novelty / Uniqueness	Online mode of booking is mostcommon and so ease of access to everyone that makes more efficient uniqueness of utilizing the technique. People can book theirticket through online and they get a QR code through SMS
4	Social Impact / Customer Satisfaction	Customers for sure they get satisfied as they are in the fast-roaming world this technique makes more easier for travelling passengers. A web page is designed in which the user can book tickets and will be provided with the QR code, which will be shown to the ticket collector and by scanning the QR code the ticket collector will get the passenger details
5	Business Model (Revenue Model)	A web page is designed in which the user can book tickets and will be provided with the QR code, which will be shown to the ticket collector and by scanning the QR code the ticket collector will get the passenger details. The booking details of the user will be stored in the database, which can be retrieved any time

6	Scalability of the Solution	The scalability of this solution is most feasible among the passengers who are willing to travel. No need of taking printout Counter ticket has to be handled with care, but SMS on mobile is enough. No need to taking out wallet and showing your ticket to TTR just tell your name to TTR that you are a passenger with valid proof
---	-----------------------------	--

## CHAPTER 4

### REQUIREMENT ANALYSIS

#### 4.1. FUNCTIONAL REQUIREMENTS

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Unique accounts	Every online booking needs to be associated with an account One account cannot be associated with multiple users
FR-2	Booking options	Search results should enable users to find the most recent and relevant booking options
FR-3	Mandatory fields	System should only allow users to move to payment only when mandatory fields such as date, time, location has been mentioned
FR-4	Synchronization	System should consider timezone synchronisation when accepting bookings from different timezones
FR-5	Authentication	Booking confirmation should be sent to user to the specified contact details

Table 4.1.1 Functional Requirements

## 4.2 NON-FUNCTIONAL REQUIREMENTS

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Search results should populate within acceptable time limits
NFR-2	Security	System should visually confirm as well as send booking confirmation to the user's contact
NFR-3	Reliability	System should accept payments via different payment methods, like PayPal, wallets, cards, vouchers, etc
NFR-4	Performance	Search results should populate within acceptable time limits
NFR-5	Availability	User should be helped appropriately to fill in the mandatory fields, incase of invalid input
NFR-6	Scalability	Use of captcha and encryption to avoid bots from booking tickets

Table 4.2.1 Non-Functional Requirements

## CHAPTER 5

### PROJECT DESIGN

#### 5.1 DATA FLOW DIAGRAMS

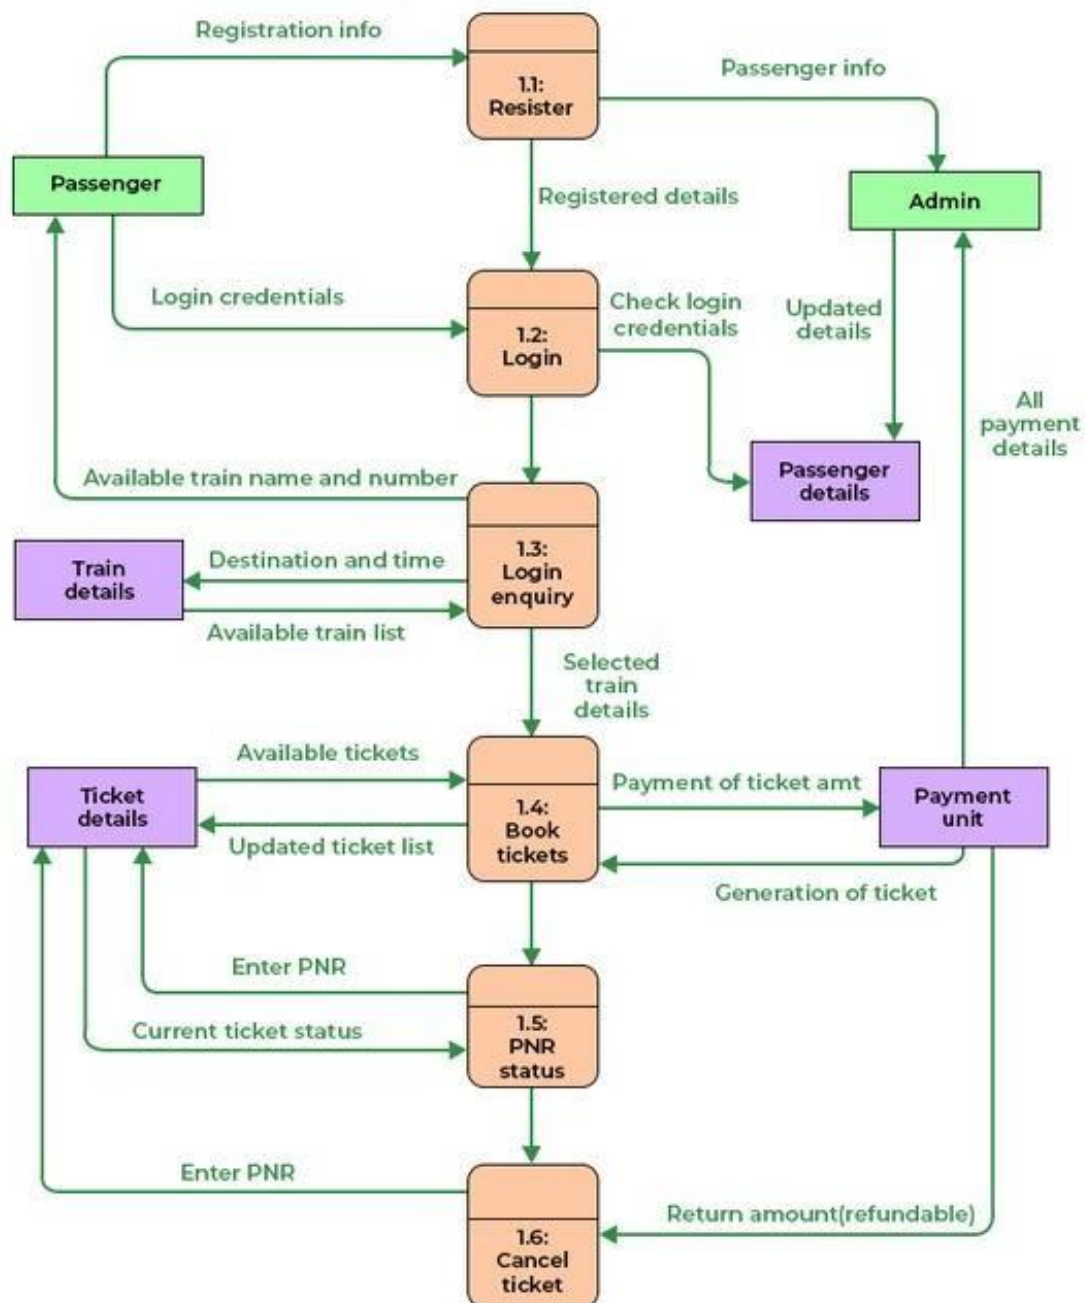

Fig 5.1.1 DATA FLOW DIAGRAM

## 5.2 SOLUTION & TECHNICAL ARCHITECTURE

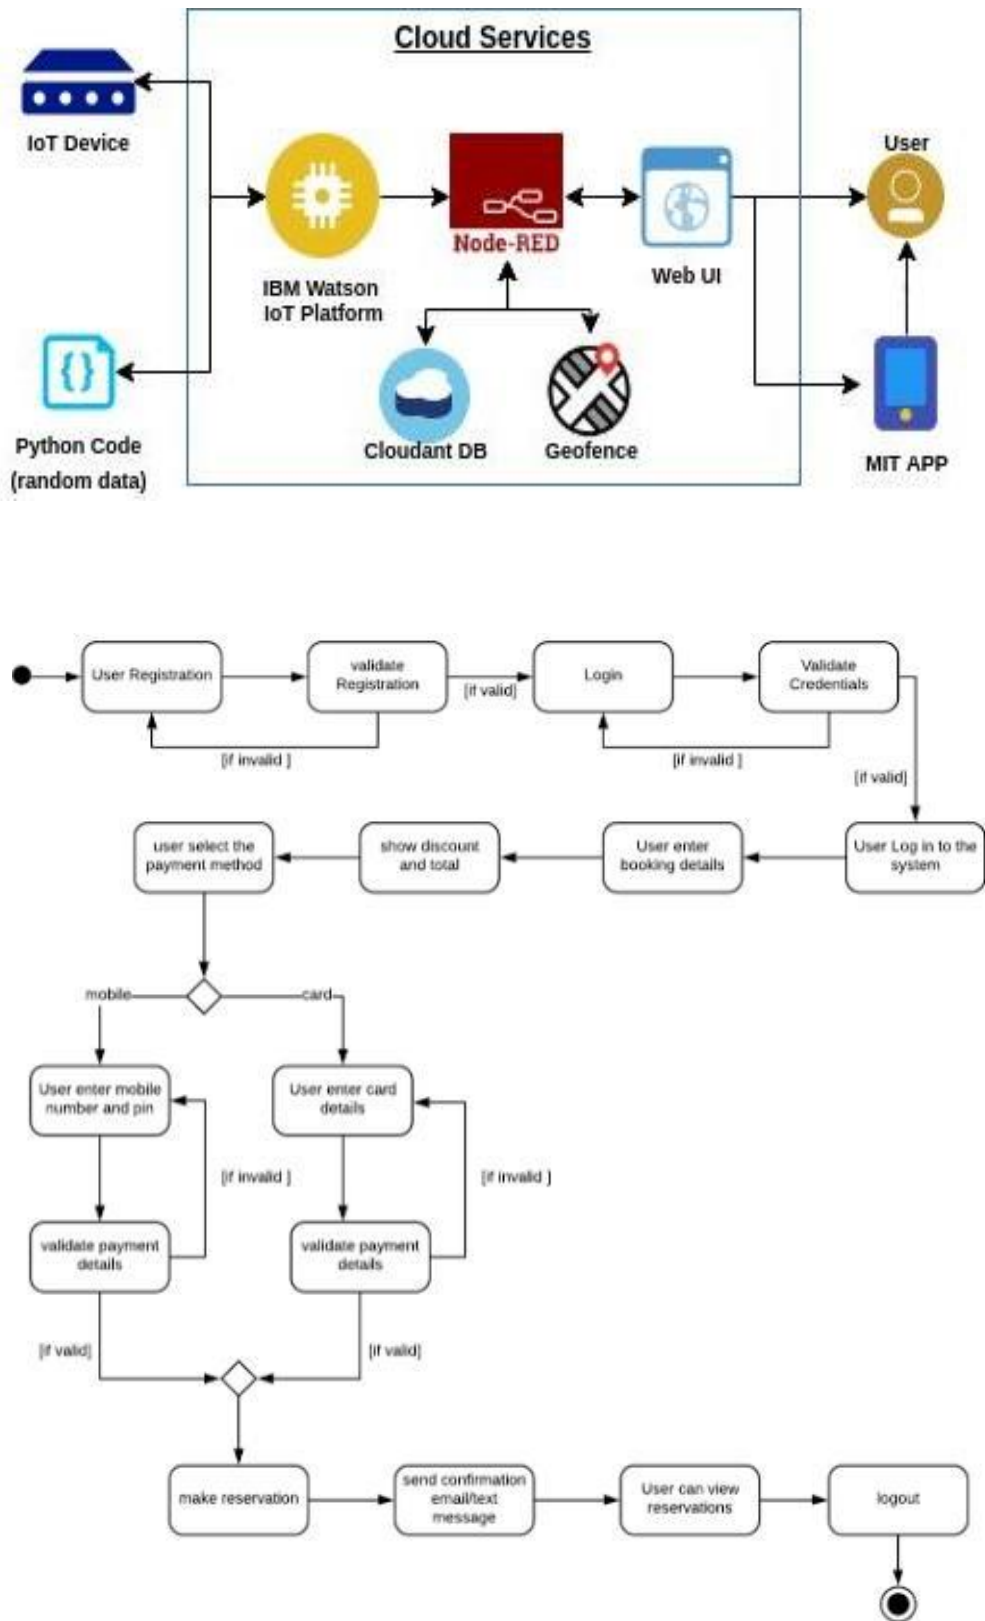

Fig 5.2.1 SOLUTION & TECHNICAL ARCHITECTURE

### 5.3 USER STORIES

User Type	Functional Requirement (Epic)	User Story Number	User Story/Task	Acceptance criteria	Priority	Release
Customer  (Mobile user, Web user)	Registration	USN-1	As a user,I can register Through the form byFilling in my details	I can register and create my account/da shboard	High	Sprint-1
		USN-2	As a user,I can register through phone numbers,Gmail,Fac ebook or other social sites	I can register & create my dashboard with Facebook login or other social sites	High	Sprint-2
	Conformation	USN-3	As a user,I will receive confirmation through OTP once registrationis successful	I can login and access my account/da shboard	High	Sprint-1
	Authentication	USN-4	As a user,I can login via id and password or through OTP received on register phone number	I can login and access my account/da shboard	High	Sprint-1
	Display Train details	USN-5	As a user,I can enter the start and destination to get the list of trains available connecting the above	I can view the train details (name&number),corr esponding routes it passes through based on the start and destination entered.	High	Sprint-1

	Booking	USN-6	As a use, I can provide the basic the details such as a name, age, gender etc.	I will view, modify or confirm the details enter.	High	Sprint-1
		USN-7	As a user, I can choose the class, seat/berth. If a preferred seat/berth is not available, I can be allocated based on the availability	I will view, modify or confirm the seat/class berth selected.	High	Sprint-1
	Payment	USN-8	As a user, I can choose to pay through credit card/debit card/UPI.	I can view the payment options available and select my desirable choice to proceed with the payment	High	Sprint-1
		USN-9	As a user, I will be redirected to the selected payment gateway and upon successful completion of payment, I will be redirected to the booking website	I can pay through the payment portal and confirm the booking if any changes need to be done, can move back the initial payment wage		

User type	Functional requirement (epic)	User story number	User story /task	Acceptance criteria	Priority	Release
	Ticket generation	USN-10	As a user,I can download the generated e-ticket for my journey along with the QR code which is used for authentication during my journey	I can show the generate QR code so that authentication can be done quickly	high	Sprint-1
	Ticket status	USN-11	As a user,I can see the status of my ticket whether it's confirmed/waiting/RAC	I can confidentially get the information and arrange alternate transport if the ticket isn't confirmed	High	Sprint-1
	Reminders notification	USN-12	As a user ,I get reminders about my journey A day before my actual journey	I can make sure that I don't miss the journey because of the constant notifications	Medium	Sprint-2
		USN-13	As a user, I can track the train using GPS and can get information such as ETA, Current stop and delay	I can track the train and go to know about the delays plan accordingly	Medium	Sprint-2
	Ticket cancellation	USN-14	As a user I can cancel my ticket if there's any change in plan	I can cancel the ticket and get are refund based on how close the date is to the journey	High	Sprint-1
	Raise queries	USN-15	As a user I can raise queries through the query box or via mail	I can view my previous queries	Low	Sprint-2

Customer Care executive	Answer the queries	USN-16	AS a user I will answer he question raised by the customer	I can view the queries and make once resolved	Medium	Sprint- 2
Administrato r	Feed details	USN-17	As a user I will feed the information about the train delays and add extra seat if new added	I can view and ensure the information that is feed	High	Sprint- 1

Table 5.3.1 User Stories

## CHAPTER 6

### PROJECT PLANNING AND SCHEDULING

#### 6.1. SPRINT PLANNING & ESTIMATION

```

### Explanation

In user module, user can use a blueprint to assess the smart solution to scan and book their tickets of the concerned area. User also check their status by this module. Payment can also be done by this module

## 7.2 FEATURE 2

### 7.2.1 CLOUD SERVICE MODULE

There are three major cloud service models software as a service (SaaS), infrastructure as a service (IaaS), platform as a service (PaaS), IBM Watson IoT platform, Node-Red etc.

**Fig 7.2.2 Cloud Service Module**

#### **Program**

```
from ibmcloudant import CouchDbSessionAuthenticator
from ibm_cloud_sdk_core.authenticators import BasicAuthenticator

authenticator = BasicAuthenticator('apikey-v2-16u3crmdpkghhxefdi
kvpssoh5fwezrmuup5fv5g3ubz', 'b0ab119f45d3e6255eabb978')
service = CloudantV1(authenticator=authenticator)

service.set_service_url('https://apikey-v2-
16u3crmdpkghhxefdikvpssoh5fwezrmuup5fv5g3ubz:b0ab119145d3e625
5eabb978e7e2f0')

cap= cv2.VideoCapture(0)
font = cv2.FONT_HERSHEY_PLAIN

while True:
    _, frame = cap.read()
    decodedObjects = pyzbar.decode (frame)
    for obj in decodedObjects:
        #print ("Data", obj.data)
        a=obj.data.decode('UTF-8')
```

```

cv2.putText(frame, "Ticket", (50, 50), font, 2,      (255, 0, 0), 3)

#print (a)
try:
    response = service.get_document(
        db='booking',
        doc_id = a
    ).get_result()
    print (response)
    time.sleep(5)
except Exception as e:
    print ("Not a Valid Ticket")
    time.sleep(5)

cv2.imshow("Frame",frame)
if cv2.waitKey(1) & 0xFF ==ord('q'):
    break
cap.release()
cv2.destroyAllWindows()
client.disconnect()

import wiotp.sdk.device
import time
import random
myConfig = {
    "identity": {
        "orgId": "gagtey",
        "typeId": "GPS",
        "deviceId":"12345"
    },
    "auth": {
        "token": "12345678"
    }
}

```

## Explanation

As a user can register through IBM Watson IOT platform and the Watson will transfer the input to Node Red services which fetches the data from cloudant DB and Geofence. Then it will be passed on to the web user interface.

## CHAPTER 8

### TESTING

#### 8.1. TEST CASES

The purpose of testing is to discover errors. Testing is to process of trying to discover every conceivable fault or weakness in a work product. It provides a way to check the functionality of the components, sub-assemblies and finish the product. It is the process to indent of ensuring that the software system meets the requirements and user expectation. There are various types of test.

#### 8.2 USER ACCEPTANCE TESTING

User Acceptance testing (UAT) is a type of testing performed by clients to understand the software system before moving the software application to invention environment. UAT is done in the final phase of testing after functional, integration and system testing is done.

**Test Result:** All the test cases mentioned above are passed approximately.

## SPRINT - 1

				Date	16-Nov-22								
				Team ID	PNT2022MD44153								
				Project Name	smart solutions for railways								
				Maximum Marks	4 marks								
Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
1	Functional	Registration	Registration through the form by Filling in my details		1.Click on register 2.Fill the registration form 3.click Register		Registration form to be filled is to be displayed	Working as expected	Pass				MUSTHAKEEM
2	UI	Generating OTP	Generating the otp for further process		1.Generating of OTP number		user can register through phone numbers, Gmail, Facebook or other social sites and to get otp number	Working as expected	pass				FAIZAL
3	Functional	OTP verification	Verify user otp using mail		1.Enter gmail id and enter password	Username: abc@gmail.com password: Testing123	OTP verified is to be displayed	Working as expected	pass				MASOOD
4	Functional	Login page	Verify user is able to log into application with invalid credentials		1.Enter into login page 2.Click on My Account dropdown button 3.Enter invalid username/email in Email text box 4.Enter valid password in password text box 5.Click on login button	Username: abc@gmail.com password: Testing123	Application should show 'incorrect email or password' validation message.	Working as expected	pass				SANHAR
5	Functional	Display Train details	The user can view about the available train details		1.As a user, I can enter the start and destination to get the list of trains available connecting the above	Username: abc@gmail.com password: Testing123678686786876876	A user can view about the available trains to enter start and destination details	Working as expected	fail				SULPIKAR M

**Table 8.1.1 Test Sprint-1**

## SPRINT - 2

				Date	16-Nov-22								
				Team ID	PNT2022MD44153								
				Project Name	smart solutions for railways								
				Maximum Marks	4 marks								
Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
1	Functional	Booking	user can provide the basic details such as a name, age, gender etc		1.Enter method of reservation 2.Enter name,age,gender 3.Enter how many tickets wants to be booked 4.Also enter the number member's details like name,age,gender		Tickets booked to be displayed	Working as expected	Pass				Musthakeem
2	UI	Booking seats	User can choose the class, seat/berth. If a preferred seat/berth isn't available I can be allocated based on the		1.Know to which the seats are available		known to which the seats are available	Working as expected	pass				Faizal
3	Functional	Payment	user, I can choose to pay through credit Card/debit card/UPI.		1.user can choose payment method 2.pay using tht method		payment for the booked tickets to be done using payment method through either the following methods credit Card/debit	Working as expected	pass				Masood
4	Functional	Redirection	user can be redirected to the selected		1.After payment the user will be redirected to the previous page		After payment the user will be redirected to the previous page	Working as expected	pass				Sulpikar

**Table 8.1.2 Test Sprint-2**

## SPRINT - 3

				Date	16-Nov-22								
				Team ID	PNT2022MD44153								
				Project Name	smart solutions for railways								
				Maximum Marks	4 marks								
Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
1	Functional	Ticket generation	a user can download the generated e ticket for my journey along with the QR code which is used for authentication during my journey.		1.Enter method of reservation 2.Enter name,age,gender 3.Enter how many tickets wants to be booked 4.Also enter the number member's details like name,age,gender		Tickets booked to be displayed	Working as expected	Pass				Sanhar
2	UI	Ticket status	a user can see the status of my ticket Whether it's confirmed/waiting/RAC		1.known to the status of the tickets booked		known to the status of the tickets booked	Working as expected	pass				Musthaikem
3	Functional	Reminder notification	a user, I get reminders about my journey 4 day before my actual journey		1.user can get reminder notification		user can get reminder notification	Working as expected	pass				Faizal
4	Functional	GPS tracking	user can track the train using GPS and can get information such as ETA, Current stop and		1.tracking train for getting information		tracking process through GPS	Working as expected	pass			0	Sulpikar

**Table 8.1.3 Test Sprint-3**

## SPRINT – 4

				Date	16-Nov-22								
				Team ID	PNT2022MD44153								
				Project Name	smart solutions for railways								
				Maximum Marks	4 marks								
Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Comments	TC for Automation(Y/N)	BUG ID	Executed By
1	Functional	Ticket cancellation	user can cancel my tickets there's any Change of plan		1.tickets to be cancelled		Tickets booked to be cancelled	Working as expected	Pass				Sanhar
2	UI	Raise queries	user can raise queries through the query box or via mail.		1.raise the queries		raise the queries	Working as expected	pass				Sanhar
3	Functional	Answer the queries	user will answer the questions/doubts Raised by the customers.		1.answer the queries		answer the queries	Working as expected	pass				Faizal
4	Functional	Feed details	a user will feed information about the trains delays and add extra seats if a new compartment is added.		1.information feeding on trains		information feeding on trains	Working as expected	pass				musthaikem

**Table 8.1.4 Test Sprint-4**

## CHAPTER 8

## RESULTS

### 9.1. PERFORMANCE METRICS

Fig 9.1.1 Performance Metrics

## **CHAPTER 10**

### **ADVANTAGES & DISADVANTAGES**

#### **10.1 ADVANTAGES**

- Openness – compatibility between different system modules, potentially from different vendors;
- Orchestration – ability to manage large numbers of devices, with full visibility over them;
- Dynamic scaling – ability to scale the system according to the application needs, through resource virtualization and cloud operation;
- Automation – ability to automate parts of the system monitoring application, leading to better performance and lower operation costs.

#### **10.2. DISADVANTAGES**

- Approaches to flexible, effective, efficient, and low-cost data collection for both railway vehicles and infrastructure monitoring, using regular trains;
- Data processing, reduction, and analysis in local controllers, and subsequent sending of that data to the cloud, for further processing;
- Online data processing systems, for real-time monitoring, using emerging
- communication technologies;
- Integrated, interoperable, and scalable solutions for railway systems preventive maintenance.

## **CHAPTER 11**

### **CONCLUSION**

Accidents occurring in Railway transportation system cost a large number of lives. So this system helps us to prevent accidents and giving information about faults or cracks in advance to railway authorities. So that they can fix them and accidents cases becomes less. This project is cost effective. By using more techniques they can be modified and developed according to their applications. By this system many lives can be saved by avoiding accidents. The idea can be implemented in large scale in the long run to facilitate better safety standards for rail tracks and provide effective testing infrastructure for achieving better results in the future

## **CHAPTER 12**

### **FUTURE SCOPE**

In future CCTV systems with IP based camera can be used for monitoring the visual videos captured from the track. It will also increase security for both passengers and railways. GPS can also be used to detect exact location of track fault area; IP cameras can also be used to show fault with the help of video. Locations on Google maps with the help of sensors can be used to detect in which area track is broken.
